Experience

SDE-2 , GoDaddy — AI Infrastructure team | Remote, India Oct 2024 – Present

- Launched **Bedrock Batch processing** for offline processing of prompts in our AI platform, reducing costs by 50% which amounts to 200K USD yearly. Used **Delay SQS, DynamoDB, lambda and SNS**
- Built a **distributed performance testing framework** using **k6 and Kubernetes**, replacing manual JMeter setups on multiple EC2 instances, automating API load testing, and enabling the system to handle a **4× traffic spike during the Super Bowl**
- Integrated in-house Knowledge Base (GoKnowB) with GoDaddy's fork of **OpenWebUI** , enabling seamless data access without migrating to a new vector store and **saving 2 weeks of engineering effort and Vector DB costs**
- Led the implementation of **running summary, sentiment and intent analysis APIs** on our central chatbot conversation store ASM (Agent state memory) using **DynamoDB, Kinesis streams, Lambdas and LLM**
- Owned end-to-end development of evaluation framework for Context Management Service, from data extraction (**Athena**) through LLM evaluation to results storage (**S3**). The pipeline is built on github actions
- Served as the **first engineer** under my manager in the team, laying down initial infra and code standards, and created **onboarding documentation** that reduced new engineer onboarding time from **5 days** to just **2 days**
- Migrated infrastructure from sceptre to **AWS CDK (IaC)**, writing the CDK repo from scratch and also created a pipeline for diff and deployment using **github actions**
- Implemented a **backfill pipeline** moving data from main DB to a dedicated search DB for **500K+** conversations.
- Led an **OPEX** initiative, mentoring **two interns** to integrate **Elastic APM** across **5 services**, improving observability and **Kibana** dashboards; earned the company's **first Platinum OPEX badge**.
- Recognized as a **go-to engineer** for helping team to troubleshoot **infrastructure and monitoring challenges**.

SDE-1, Amazon — Pay Extract Team | Hyderabad, India Aug 2022 – Jan 2024

- Built *PayAnomalyRoutingService* from scratch. It's an automated ticketing mechanism that escalates issues caused by inconsistent upstream data, leading to a **15% decline** in main-queue tickets.
- Launched the *Pay Extract Service* for the US salaried population, integrating for **200,000+** employees.
- Connected the core service to a new upstream service by validating API contracts and subscribing to new SNS
- Resolved Step Function timeouts by setting dynamic timeouts, cutting related tickets by **80%**.
- Implemented UI changes using React as per customer requirements.

Skills

Languages: Java, Python, TypeScript, Go, C++ , C

Frameworks & Tools: Node.js, React, GraphQL, REST, JUnit, Mockito, Pytest, Jest, GitHub Actions, CI/CD, Git

AWS & Cloud: CDK, Lambda, Fargate, DynamoDB, S3, Bedrock, EC2, RDS, Athena, CloudFormation, CloudWatch, SQS, SNS, SES, Step Functions, ELB, VPC, Route 53, API Gateway, IAM

Observability & Datastores: Elasticsearch, Kibana, Elastic APM, MongoDB, PostgreSQL, Pinecone

Achievements & Volunteering

- Represented **VNR VJiet** at **ACM ICPC Pune Regionals 2019**, ranked **92**.
- Competitive Programming: **Codeforces 1656 (Expert)** (the_pythor), **CodeChef 2021 (5 star)** (the_pythor).
- Programming Head, *Turing Hut* (college competitive programming club); taught advanced DSA to juniors.

Education

VNR VJiet | Bachelor of Technology in Computer Science

2018 – 2022
